### DETAILED ACTION

**Please Note:** In an effort to enhance communication with our customers and reduce processing time, Group 1639 is running a Fax Response Pilot for Written Restriction Requirements. A dedicated Fax machine is in place to receive your responses. The Fax number is 703-308-4315. A Fax cover sheet is attached to this Office Action for your convenience. We encourage your participation in this Pilot program. Thank you in advance for allowing us to enhance our customer service. Please limit the use of this dedicated Fax number to responses to Written Restrictions.

#### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a *first* method of fabricating an array of multiple features, classified variously, for example, any of class 435, subclass 6 or class 536, subclass 25.32.
  - II. Claims 10-17, drawn to a *second* method of fabricating an array of multiple features, classified variously, for example, any of class 435, subclass 6 or class 536, subclass 25.32.
  - III. Claims 18 and 19, drawn to a method of fabricating an array of multiple linear rows, classified variously, for example, any of class 435, subclass 6 or class 536, subclass 25.32.
  - IV. Claims 20-23, 25 and 26, drawn to a *first* method of reading an array of multiple features, classified variously, for example, any of class 436, subclass 164.
  - V. Claim 24, drawn to a *second* method of reading an array of multiple features, classified variously, for example, any of class 436, subclass 164.
2. The inventions are distinct, each from the other because of the following reasons:

3. Groups I – V are different methods. Each of the methods is different because they use different steps, require different reagents and/or will produce different results. They therefore have different issues regarding patentability and enablement and represent patentably distinct subject matter. In the instant case, the methods of Groups I – III are drawn to fabricating arrays, while the methods of Groups IV & V are drawn to reading arrays. These are clearly different end results and require completely different steps.

4. The methods of Groups I – III are different from each other because the steps of the methods are different. Groups II and III require a “drawn substrate” that is not required by Group I and a different “placing” step (i.e. step (b)). Group III further requires specifics of the “placing” not required by the other two methods (i.e. steps (i) and (ii)). In the same vein, the methods of Groups IV & V are different from each other because the steps of the methods are different. The method of Group V in step (a) requires “determining an identity of a drawn direction of the substrate” that is not required in the method of Group IV and also a different “scanning” step (i.e. step (b)).

5. Therefore, the groups that describe these inventions each have different issues regarding patentability and enablement, and represent patentably distinct subject matter, which merits separate and burdensome searches. Art anticipating or rendering obvious each of the above-identified groups respectively would not necessarily anticipate or render obvious another group, because they are drawn to different inventions that have

different distinguishing features and/or characteristics. Each group could support a separate patent.

6. These inventions have acquired a separate status in the art as shown by their different classification and/or divergent subject matter. The different inventions would require different searches in the patent and non-patent databases, and there is no expectation that the searches would be coextensive. Therefore, this does create an undue search burden, and restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Because the above restriction/election requirement is complex, a telephone call to applicants to request an oral election was not made. See MPEP § 812.01.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Applicant is also reminded that a 1 - month (not less than 30 days) shortened statutory period will be set for response when a written requirement is made without an action on the merits. This period may be extended under the provisions of 37 CFR 1.136(a). Such action will not be an "action on the merits" for purposes of the second action final program, see MPEP 809.02(a).
10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maurie Garcia Baker, Ph.D. whose telephone number is (703) 308-0065.
